

EUAN SMITH

Cybersecurity & Digital Forensics · Full-Stack Developer · AI Systems Builder

smith.euan66@icloud.com · euansmith.net · linkedin.com/in/euan-smith-4295123a6 · Dublin, Ireland

PROFILE

Cybersecurity and Digital Forensics student at Technological University Dublin with production experience across full-stack development, AI/ML automation, and security tooling. Builds and ships autonomous systems independently — from computer vision-driven arbitrage platforms to multi-agent AI research environments. Holds SAP security certifications, active (ISC)² Candidate membership, and is pursuing CompTIA Security+ alongside hands-on SOC and penetration testing training via Hack The Box and Let's Defend.

EXPERIENCE

Software Developer Intern Summer 2026

European Digital Media Observatory

- Shipped production-ready full-stack features for EDMO's EU-wide disinformation monitoring platform, used by researchers across multiple EU member states
- Eliminated manual social media data collection by integrating analytics APIs directly into the CMS, cutting researcher time on routine extraction tasks
- Automated recurring backend reporting pipelines end-to-end, freeing analyst capacity previously consumed by manual data processing
- Delivered across frontend and API layers in an agile, cross-national team — shipping features under real research deadlines with no rework cycle

Freelance Web Developer 2024 – Present

Self-Employed

- Build and deliver performance-first websites hand-coded in Next.js and Tailwind CSS — consistently outperforming template-built alternatives on Core Web Vitals
- Apply security-first practices on every project — hardened HTTP headers, input validation, and dependency auditing so clients meet modern web security standards from launch
- Sole point of contact from scoping to post-launch: clients receive a complete, maintained site without managing multiple vendors

PROJECTS

Marketplace Intelligence System

- Designed and deployed an autonomous resale arbitrage platform — computer vision pipeline identifies pricing opportunities end-to-end with no human input required
- Generated €500+ directed entirely to charitable donations, proving real-world viability of the CV and pricing model outside a controlled environment

Multi-Agent AI Research Sandbox

- Designed a virtualized isolation environment enabling repeatable, controlled experiments on emergent multi-agent AI coordination behavior
- Built event logging and behavioral analysis tooling from scratch — surfacing coordination patterns invisible to standard black-box agent frameworks
- Applied experimental findings directly to production agentic system design, reducing iteration cycles on real-world tooling

EDUCATION

BSc Cybersecurity & Digital Forensics 2024 – Present

Technological University Dublin

Student Council Representative · Spirit of the Class Award · Stealth Award

COMPLETED

IN PROGRESS

– Hack The Box (active)

TECHNICAL SKILLS
